

PSY349

Field Methods for Social Psychology

Course Syllabus

Thursdays from 2:00pm-5:00pm. In person. SS560.

Instructor and Teaching Assistant Information

Instructor:

Amanda Sharples, Ph.D.

amanda.sharples@mail.utoronto.ca

Instructor Office hours:

Online Mondays and Wednesdays. Please book through the calendar on the Quercus site.

Teaching Assistant

Joel LeForestier, joel.leforestier@mail.utoronto.ca

office hours: by appointment

Course Description and Learning Objectives

The use of field methods in social psychology has grown substantially over the last decade, with some arguing that these methods will be critical to the future of this field. This course will introduce you to innovative field research methods that are used to study fundamental questions in social psychology. We will explore topics including research design, data analysis, and the dissemination of findings, with a focus on how to adapt our approaches for the study of real-world phenomena. As this is a lab course, much of the focus will be on applying what we are learning, which will be done by completing weekly(ish) activities and labs and a final research project.

Learning Objectives:

1. *Knowledge:* By the end of this course, you should have a solid understanding of key methods and measures used in field studies. You should understand how field studies differ from other methodologies, and their strengths and weaknesses.
2. *Application:* By the end of this course, you should understand how you may use field methods to test research questions that interest you. As this is a lab course, much of the class time will be spent applying what we are learning.
3. *Scientific Thinking:* By the end of this course, you should understand how the empirical method applies to field research. You should feel more comfortable evaluating research in general, but field studies specifically and the conclusions that are drawn from these studies.
4. *Communication:* By the end of this course, you should have improved your ability to communicate your thoughts and research findings verbally and in writing.
5. *Professional Development:* By the end of this course, you should have improved your time-management skills and ability to respond appropriately to constructive feedback.

Class Structure: Classes will be composed of lectures, videos, short writing activities, and group discussion. Each week, class time will be broken up between lecture and group discussions (because honestly, who wants to listen to me talk for 3 hours).

Discussion Participation: In the class discussions, you will have the opportunity to express your opinion and learn your classmates' opinions on topics and readings. This provides an interactive component of the course that is meant to be engaging for students. During discussions, please remember that some of your classmates may have opinions that are different from your own. Please be respectful of your fellow classmates' opinions, and be respectful in language and when sharing your opinions.

Note about prerequisites: It is your responsibility to ensure that you have met *all* prerequisites listed in the Psychology section of the A&S Calendar for this course. If you lack any prerequisites you may be removed.

Course Resources

Readings: All readings for this course, which include chapters and journal articles, will be made available on the Quercus site under library course reserves. The citations for these readings may be found in this syllabus after the lecture schedule.

When reading experimental journal articles, try to make note of the research question, the hypotheses, identify the key variables and how they are being operationalized (e.g., what kind of measures are they using), identify the design of the study (was there an experimental manipulation? Was it within or between subjects), identify the key results, and provide a 1-2 sentence paraphrased conclusion of what they found.

When reading theoretical papers or chapters, I will guide as to what information you should take away from these papers.

Quercus: All course materials will be made available on the Quercus website, including lecture slides, announcements, and supplementary materials. You are advised to regularly check the announcements section of the Quercus website because you are solely responsible for staying on top of all course announcements made through Quercus.

Ongoing feedback: I've created a survey that students can fill out anonymously after each class to provide me with feedback on lectures. This gives you the opportunity to let me know if I am going through the material too quickly, if there is a particular concept you are really struggling with, if there is something that could be improved about the structure of each class, etc. The link to this survey is available on Quercus. I can't promise that I will be able to touch on every concern expressed in the feedback surveys. I will be looking for common concerns being expressed by students.

How to get help with the course: The fastest way to get help with the course is to attend one of the weekly office hours. If you have a short question that can be answered via email, then please email myself or the TA. Before emailing, however, please check the course syllabus as most of the important information about the course can be found there. If you have a question that may require a longer explanation, please come to office hours instead of emailing as it will be much easier for me to explain this in person and it will give you the opportunity to ask follow-up questions

Course Evaluation

Component	Date	Weight
Weekly labs/activities	Throughout the term	18%
Participation (In class or discussion board)	Throughout the term	5%
Study Proposal	October 7th	15%
Poster Presentation	November 18th	25%
Final Research Paper	Dec 2nd	37%

Throughout the course there will be a combination of summative and formative forms of assessment. Summative forms of assessment are meant to test your knowledge of the content and see what you are learning in the course. These include your presentation and the written paper. Formative assessments are meant to provide feedback to you so you may improve your work, and to provide feedback to me regarding how you are learning. These include group work and participation, your paper outline, and some of your weekly activities (e.g., peer feedback activity, meta-reflection activities)

Weekly Labs/Activities: During some classes, you will be required to complete labs and activities sometimes alone and sometimes in small groups. These are described more in the course schedule below. Most of these are worth 2% each, but the final peer feedback activity is worth 4%. Ideally these will be completed in person in class, but there will be online options as well for those that prefer this. These will be due a week after the class in which they were assigned (at 11:59pm the following Thursday).

Participation: Part of your grade will be allocated to participating in weekly discussions. You can participate in person or on the online discussion board, but you should try to contribute at least 1 thoughtful question and 1 thoughtful response to a question each week.

Research Proposal, Presentation, and Final Paper: For this course, you will have to complete a research project. This will involve you coming up with a field study that does not require ethics approval. This may involve using archival or existing data or conducting an observational study. We will discuss ways to do this in the first few lectures. This research project will be broken into three components:

Proposal: First, you will submit a 3 page (double-spaced) proposal where you describe your research question and specific hypotheses. This should provide a brief introduction to the topic, a statement of the research question and specific hypothesis, and a description of the methods you intend to use (if you are using existing data, describe the methods they used).

Presentation: After you finish conducting your research, you will create a poster to present during a poster presentation session (held in class November 18th). I will give you some example templates so you understand what a poster looks like. You may print these professionally but this can be expensive (\$70-\$100), so it is not a requirement. You may create your poster using poster board and printed text and you will not be penalized in any way for this. I will provide example poster templates. The evaluation will be focused on the quality of the content, general organization of the poster, and your brief synopsis of the poster's content. You will be evaluated by myself, the TA, and your peers (e.g., your peers evaluations will factor into your final score, but the weight of the professor and TA's evaluation will be greater).

Final Paper: The final paper should include an abstract, introduction, a methods section, a results section, a discussion section, and a reference list. More examples and information about how to write a research paper will be discussed in class. This should be roughly 10-15 pages long (not including references or appendices) and should be in APA style 7. This should also be double-spaced, 12 point Times New Roman font.

A few important details: For the final paper, when you are summarizing past research, you must include citations for at least 8 papers published in peer-reviewed journals (we will discuss this in class). The paper should be written in APA style. Both the proposal and the final paper should be handed in on Quercus by 11:59pm on the day they are due, and should include a full reference list.

More details on these assignments will be provided in class.

Policy on Lateness: The Covid 19 pandemic has impacted all of our lives in various ways, and I understand that some of you may be facing many additional stressors as a result of this. I understand this and I am happy to support you and work with you so that you can successfully complete this course and have a positive learning experience. For the proposal outline, media assignment, and the final paper, you do not need to contact me so long as your assignment is submitted within 24 hours of the due date. Following this, a 2% late penalty may apply. If you are concerned about meeting a deadline or need assistance making a plan for getting work completed, please contact me as soon as you can so we can work this out together.

Ensuring Transparency in Grading: Your proposal and final paper will be marked by the TA and I. Marking these types of assignments can be challenging and somewhat subjective (my perception of a well-written paper may differ from the TA's). In order to make this process as fair as possible, I will be creating a detailed rubric for myself and the TA to use when grading these assignments. I will provide you with a copy of these rubrics at least one week before the assignment is due. This should provide you with a clear understanding of how you will be graded before you submit your assignment.

Contesting your grade: Please think carefully before contesting your grade for an assignment or test. Your course instructors and TAs work very hard to mark course assignments and exams as fairly as possible. If you have concerns about how an assignment was graded, you need to submit an official re-grade request form explaining why you think your assignment should be re-graded. This can be found on Quercus under "course materials." You must send this to the person that graded your assignment (either myself or the TA) within 2 weeks of receiving your grade. We will review your request but

reserve the right to remark the entire paper, which means you could lose marks in other sections.

If there has been a calculation error, please just let myself or the TA know and we will re-calculate your grade immediately.

Academic Resources

Accessibility Needs: Students with diverse learning styles and needs are welcome in this course, and we will do everything in our power to ensure that all students have equal opportunities to succeed in the course. If you have a disability/health consideration that may require accommodations, please feel free to approach me and/or Accessibility Services at (416) 978 8060; accessibility.utoronto.ca.

Writing: One of the key skill-sets you are developing as a student are your communication skills, including written communication. Understanding how to communicate clearly and concisely is essential for many career paths. The university provides its students with a number of resources to help them develop these skills. For more information on campus writing centres and writing courses, please visit <http://www.writing.utoronto.ca/>. More info on writing resources available at U of T will be posted on Quercus. I highly recommend that you make use of these. Moreover, I'm more than happy to give you feedback on your writing during my office hours, so feel free to stop by.

Academic Integrity and Plagiarism: Academic misconduct will be taken very seriously in this class. Cheating and plagiarism will not be tolerated and will be reported through the official university channels. Please refer to the University of Toronto's Code of Behaviour on Academic Matters for more information about what constitutes academic misconduct and how academic misconduct will be dealt with: <http://www.governingcouncil.utoronto.ca/Assets/Governing+Council+Digital+Assets/Policies/PDF/ppjun011995.pdf>

Resources for Distressed Students: As a student, you may experience challenges that can interfere with learning, such as strained relationships, increased anxiety, substance use, feeling down, difficulty concentrating and/or lack of motivation, financial concerns, family worries and so forth. These factors may affect your academic performance and/or reduce your ability to participate fully in daily activities. All of us benefit from support and guidance during times of struggle; there is no shame in needing help or in asking for help. There are many helpful resources available through your college Registrar or through Student Life (studentlife.utoronto.ca and www.studentlife.utoronto.ca/feeling-distressed). An important part of the University experience is learning how and when to ask for help. Please take the time to inform yourself of available resources and do not hesitate to seek assistance from your Teaching Assistant or from me to help learn what supports are available

Course Schedule

I will try my best to stick to this outline, but changes may be made. Changes will be announced on Quercus. All readings can be found in the reference list following this page.

Lecture	Date	Topic	Notes
L1	Sept 9	What are field methods?	No activities
L2	Sept 16	Common field methods and manipulating variables in the real world	Activity: Come up with an experimental hypothesis and design a study to test this in a controlled lab study and in a field study. Evaluate the differences. 2%
L3	Sept 23	Environments for field research	Activity: Evaluating strengths and limitations of two different studies in two different environments. 2%
L4	Sept 30	Daily diary and experience sampling designs.	Activity: collecting and organizing daily experience data 2%
L5	Oct 7	Innovative measures for capturing real-world phenomena part 1.	No Activity
L6	Oct 14	Innovative measures for capturing real-world phenomena part 2.	Activity: Come up with multiple field measures that may be used to capture the same construct (you will be given a list of constructs). Explain strengths and weaknesses of each. 2%
L7	Oct 21	Data analysis for field experiments Part 1.	Activity: Create an outline for your R or SPSS syntax to analyze your data (focus on commenting and recognizing necessary steps). 2%
L8	Oct 28	Data analysis for field experiments Part 2.	One-on-One help from instructor and TA to finalize your analyses
L9	Nov 4	Writing a research paper.	Activity: Understanding the sections of a research paper. 2%

	Nov 11	<i>Reading Week - No Lecture</i>	
	Nov 18	Poster Presentations	Activity: evaluating each other's work and asking questions. 2%
L10	Nov 25	Maintaining integrity with research design, data analysis and reporting. Make-up poster session for anyone missing Nov 18.	Activity: Peer feedback on final paper. 4% - you will give thoughtful feedback to 2 other peers on their final paper.
L11	Dec 2	Reflecting on what we have learned.
