

Welcome to the PSY397H Biological Rhythms, Fall, 2021.
Tuesdays 11am-2 pm.

Instructor: Dr. Martin Ralph Tel: (416) 978-7621 Room SS4017; Lab: (416) 978-3433

TA: Kyle Nealy

Text: Textbook for reference (see below) and Selected readings.

DATE	TOPIC	READINGS
Sept. 14	Temporal biology and the organization of living things; Adaptive significance; General circadian organization: the biological "hierarchy" of circadian clocks; Temporal programs.	A
Sept. 21	Comparative anatomy and physiology of clocks.	B
Sept. 28	Properties and Entrainment of biological clocks. Resetting by light and nonphotic mechanisms including <i>social zeitgebers</i> .	C
Oct. 5	Sleep, and circadian rhythms in human beings. <i>Chronotype</i> , jet lag, daylight savings time, temporal isolation.	D
Oct. 12	TEST 1 (25%) covers everything including May 13. Followed by: Introduction to cellular and molecular mechanisms. Discovery of clock genes. First models – Fruit flies, fungus.	E
Oct. 19	Molecular mechanisms of rhythm production and regulation – Molecular clocks throughout the living world.	E
Oct. 26	The "other" circadian systems? Food entrainable oscillators; amphetamine sensitive oscillators; metabolic clocks, circadian disorganization in chronic mental disorders.	F
Nov. 2	Time memory, time-place learning and the perception of time	G
Nov. 8-12	Reading Week	
Nov. 16	TEST 2 (30%) covers up to and including May 27. Followed by: Non-circadian biological clocks: tidal, lunar, annual, ultradian	H
Nov. 23	Seasonality, photoperiodic time measurement, orientation, migration, and the sun compasses	I
Nov. 30	Seasonality mechanisms, sleep and hibernation	J
Dec. 7	Circadian disorganization, chronic disease, and longevity The different conceptualizations of Time in biology. Integration of timing mechanisms; and adaptive significance for human beings	K

PSY397 Biological Rhythms

Tuesdays 11-2 pm

Instructor: Martin R. Ralph, Ph.D.

Office: Room 143 Ramsay Wright Hall

Phone: 416-978-7621; Email: ralph@psych.utoronto.ca

TA: Kyle Nealy

Course description

Biological rhythmicity is found throughout Nature, from bacteria to humans. While all living systems display various cycles, specific types of rhythms have evolved which provide temporal organization to the physiology and behavior of organisms and the ability to anticipate regular, cyclic changes in their environments. These are what we call “biological clocks”. Some mechanisms have become adapted for use in complex behaviors such as migration, seasonality, and coordinated reproduction. In addition, organisms gain an adaptive advantage from being able to predict the possible recurrence of conditioned that they have experienced. This is time memory, an aspect of circadian biology that is used in concert with the biological clock to predict the likelihood that significant events are going to recur at the same time as the initial experience. In this course, we will examine both mechanisms, the highly conserved systems that predict the regular changes in the environment, as well as the systems that underlie the memory of events that are not regular, nor linked to specific times of day. We will review current findings at all levels of organization from molecular genetic, to anatomical, to behavioral, always coming back to the question of how these rhythmic systems are able to function to predict demand, thereby operating as biological clocks, and we will examine the consequences of disordered timing systems.

Marking scheme

Term test 1: 25%; Term test 2: 30%; Final 2 hour exam: 45%

Tests will be a combination of multiple choice, short answer, matching, and fill-in-the-blanks. Some minor arithmetic calculations are required for some questions. No aids are allowed on tests.

Missed tests may be made up only with University of Toronto approved documentation, and must be taken before marked tests are returned to the class (~1 week). Students who are unable to make up test must show evidence for why this was not possible, again with U. of Toronto approved documentation.

Asking questions, office hours and reviews

Within reason, you are encouraged to ask questions during the lectures. Bear in mind that although the instructor may be responsive in this way, your fellow students may not appreciate too many interruptions. The instructor will reserve some lecture time at the end of each class to answer questions. Official office hours: 11-12 am Fridays. Other hours by appointment.

Recommended resources

Circadian Rhythms: A Very Short Introduction (Very Short Introductions) 1st Edition, Kindle Edition by Russell Foster and Leon Kreitzman

[Rhythms of Life: The Biological Clocks that Control the Daily Lives of Every Living Thing](#) by Russell G. Foster and Leon Kreitzman | Oct 10 2005.

[Seasons of Life: The Biological Rhythms That Enable Living Things to Thrive and Survive](#) by Russell G. Foster and Leon Kreitzman | Jun 30 2009

TEXTBOOK (recommended)

Introducing Biological Rhythms: A primer on the Temporal Organization of Life... (2006) Willard L. Koukkari & Robert B. Sothorn, authors.

The BioClock Studio, UCSD: <https://ccb.ucsd.edu/the-bioclock-studio/index.html>

Reading list (articles)

Week 1

required

A. Week 1; September 14

1. Pittendrigh, CS (1993) Temporal organization: reflections of a Darwinian clock-watcher. *Annu Rev Physiol.* 1993;55:16-54.
2. Vitaterna, M. H., Takahashi, J. S., & Turek, F. W. (2001). Overview of circadian rhythms. *Alcohol Research & Health*, 25(2), 85-93.
3. Roenneberg T, Merrow M. (2005) Circadian clocks - the fall and rise of physiology. *Nat Rev Mol Cell Biol.* 2005 Dec;6(12):965-71.

B. Week 2; September 21

- 4 Lundkvist, GB, Block, GD. (2005) Role of Neuronal Membrane Events in Circadian Rhythm Generation *METHODS IN ENZYMOLOGY*, VOL. 393:623-642.
